Update on New Provision on Ballast Chlorinating in Argentina

May 2017

Further to the article published by the Club advising on new provisions on Ballast Water Chlorinating in Argentina, Club Correspondents Pandi Liquidadores have now reported that the local authorities are reviewing the procedures and chlorinating certificates are no longer being requested. Accordingly, the Centro de Navegacion have issued a suggestion to not chlorinate pending clarification by the Authorities. In the meantime, the usual ballasting requirements should be maintained.
